

TRAINING AND EDUCATION

Nowadays we are experiencing constant changes in our lives. The situation of a company introducing new technologies and ways of working is changing fundamentally. More and more people perform work that they did not know before or practice professions which were totally unfamiliar to them. Not the opportunity but the necessity of lifelong learning is to be realized through concrete measures. We have to consider learning and continuing education as acquisition of skills for new tasks. That's why simple but effective methods in the education are indispensable.

The competitiveness of many companies depends on whether the creative potential of their employees can be awakened. Therefore, the occupational training is not only a cost factor, but the investment in future, because the qualification of the staff is a decisive factor for the innovation processes.

The ÖMC trainers, licensed as instructors for DGQ (German quality society) and TÜV trainings courses develop with the help of their experience as consultants experience-based learning forms, which foster individual initiative, independent thinking and problem solving skills of the participants. The trainings are conducted in German, Russian and English.

References are available for the following areas:

- Development and conducting of training courses for approximately 15 educational institutions
- Conduction of certificated training courses for DGQ (German society for quality) and TÜV Academies
- Organization and conduction of study tours for management representatives and executives

ÖMC service spectrum in the field of education:
